

A B S T R A C T

The invention provides a biguanide drug-containing jelly preparation of which discomfort upon administration is decreased
5 by the control of its harshness or bitterness. In addition, the preparation has stability and excellent ability for releasing a drug in the digestive tract. The biguanide drug-containing jelly preparation of the invention is characterized by comprising a biguanide drug, an inorganic acid, and a water-soluble polymer.
10 The jelly preparation of the invention is excellent in both stability and ability for releasing a drug, which are usually incompatible characters, particularly by the action of the inorganic acid.
